Executive Summary: FNP Sales Analysis Dashboard

Prepared by Shabbar | Entry-level Data Analyst | Tool: Microsoft Excel

Note: Figures read from charts are approximate and should be verified against the underlying pivot tables. Delivery time is assumed to be in days and revenue in INR, as the dashboard does not label units.

1. Project Overview

This project is an interactive Excel dashboard that analyzes online gifting sales for FNP. It turns 1,000 orders into insights on revenue, customer spending, delivery performance, product and category mix, seasonality, and geography. Slicers for Occasion, Order Date, and Delivery Date let stakeholders filter the data themselves.

2. Objectives

- Find out which occasions, categories, and products drive revenue.
- Understand seasonal and hourly demand patterns.
- Measure delivery efficiency and customer spending behaviour.
- Identify the top-performing cities for targeted marketing and logistics.

3. Headline KPIs

Metric	Value
Total Orders	1,000
Total Revenue	3,520,984
Average Customer Spend	~3,521 per order
Average Order-to-Delivery Time	5.53 (days, assumed)

4. Key Findings

Occasions

Anniversary is the top revenue occasion (~670K), followed by Raksha Bandhan (~630K), All Occasions (~580K), and Holi (~570K). Birthday (~410K), Valentine's Day (~330K), and Diwali (~310K) are the weakest of the group.

Categories

Colors is the clear leader at roughly 1M, close to 28% of total revenue. Soft Toys (~735K) and Sweets (~730K) come next. Cake, Raksha Bandhan, Mugs, and Plants each contribute under ~330K, so there is a big gap between the top three categories and the rest.

Seasonality

Monthly revenue is highly concentrated. There are two major peaks, February (~700K) and August (~735K), and a smaller one in November (~450K). March is also strong (~510K). Most other months sit between 100K and 160K, so a handful of months carry most of the year.

Time of Day

Revenue peaks in the evening, around 19:00 and 20:00 (~185K each). The lowest points are around 12:00, 17:00, and 21:00 (~155K to 160K), and the line moves in a fairly narrow band outside the evening peak.

Products

The top 5 products each earn ~97K to 122K, with Magnam Set (~122K) and Quia Gift (~115K) in front. Together the top 5 account for about 15% of revenue, so revenue is spread across many products rather than dependent on a few.

Geography

The top 10 cities by orders are Imphal (~29), Dhanbad (~28), Kavali (~27), and Haridwar (~24), followed by Bidhannagar, Dibrugarh, North Dumdum, Bhatpara, Agra, and Chinsurah. Demand comes largely from tier-2 and tier-3 cities across many regions, and the top 10 together make up only about 22% of orders.

Operations

Average delivery takes 5.53 days, which is slow for a gifting business where occasion dates are fixed.

5. Business Insights

1. Revenue depends heavily on a few months and a few categories, so performance is vulnerable to seasonal swings.
2. Demand is nationwide and fragmented, which points to growth in smaller cities rather than just metros.
3. Evening hours are the natural window for promotions, flash sales, and push notifications.
4. Delivery time is a likely risk on date-sensitive occasions.

6. Recommendations

- **Plan inventory and campaigns ahead of the February, August, and November peaks**, and build off-season offers for the low months.
- **Double down on Colors, Soft Toys, and Sweets**, and review whether Mugs, Plants, and Cake need bundling or repricing.
- **Schedule promotions around 7 to 9 PM**, when buying intent is highest.
- **Reduce delivery time**, for example with regional fulfilment partners in high-order cities such as Imphal, Dhanbad, and Kavali.
- **Increase average order value** through gift bundles and add-ons, since spend per order is ~3.5K.

7. Limitations and Next Steps

- The dashboard covers a single year of order dates (2023) with delivery dates into 2024, so year-on-year trends can't be assessed.
- The unit of delivery time and the currency are not labelled on the dashboard, so they should be stated explicitly.
- Charts could be improved: the hourly chart's x-axis isn't in time order, and there are typos ("Occassions", "Delivary", "Ciites").

- Suggested extensions: customer segmentation, repeat-purchase analysis, and a cost/margin view.

8. Tools Used

Microsoft Excel (data cleaning, pivot tables, pivot charts, slicers, KPI cards).
